AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

- 1. (original) An isolated polynucleotide comprising a nucleic acid sequence encoding geraniol synthase (GES), said GES being capable of converting geranyl diphosphate to geraniol.
- 2. (currently amended) An isolated polynucleotide comprising a nucleic acid sequence selected from the group consisting of
 - a. the nucleic acid sequence of SEQ ID NO:1;
 - b. the complement of SEQ ID NO:1;
 - c. a nucleic acid sequence which is at least 90% homologous to SEQ ID NO:[[I]]1; and
 - d. a nucleic acid sequence capable of hybridizing to either (a) or (b).
- 3. (original) The isolated polynucleotide according to claim 1 encoding the amino acid sequence of SEQ ID NO:2.
- 4. (previously presented) The isolated polynucleotide according to claim 1 encoding an amino acid sequence which is at least 60%, preferably at least 70%, more preferably at least 80% or more, most preferably at least 90% homologous (similar + identical amino acids) to the amino acid sequence of SEQ ID NO:2.
- 5. (original) The isolated polynucleotide according to claim 1 encoding an amino acid sequence selected from the group consisting of SEQ ID NO:2, fragments, derivatives and analogs thereof

- 6. (withdrawn) A polypeptide having GES activity, said activity being characterized by converting geranyl diphosphate (GDP) to geraniol.
- 7. (withdrawn) The polypeptide according to claim 6 having the sequence of SEQ ID NO:2.
- 8. (withdrawn) The polypeptide according to claim 6 which is at least 60%, preferably at least 70%, more preferably at least 80% or more, most preferably at least 90% homologous (similar + identical amino acids) to the amino acid sequence set forth in SEQ ID NO:2.
- 9. (withdrawn) The polypeptide according to claim 6 selected from the group consisting of a polypeptide having the amino acid sequence of SEQ ID NO:2 and fragments, derivatives and analogs thereof.
- 10. (previously presented) An expression vector comprising the polynucleotide according to claim 1.
- 11. (original) A host cell comprising the expression vector according to claim 10.
- 12. (original) A method for producing recombinant GES, the method comprising:
- a. culturing the host cell according to claim 11 under conditions suitable for the expression of GES; and
 - b. recovering GES from the host cell culture.
 - 13. (withdrawn) A method for producing geraniol, the method comprising:
- a. culturing the host cell according to claim 11 under conditions suitable for the expression and activity of the GES; and
 - b. recovering geraniol from the host cell culture.

- 14. (withdrawn) A method for producing geraniol metabolites in the terpene biosynthesis pathway, the method comprising:
 - a. culturing the host cell according to claim 11 under conditions suitable for the expression and activity of the GES; and
 - b. recovering geraniol metabolites from the host cell culture.
- 15. (withdrawn) The method according to claim 14, wherein the geraniol metabolites are geranial and neral.
- 16. (previously presented) A prokaryotic organism comprising a polynucleotide sequence according to claim 1 stably integrated into its genome.
- 17. (withdrawn) Use of geraniol obtained by the method according to claim 13 in a product selected from the group consisting of agricultural, cosmetic and food products.
- 18. (withdrawn) Use of a geraniol metabolite obtained by the method according to claim 14 in a product selected from the group consisting of agricultural, cosmetic and food products.
